AVENUE NURSERIES

Spring 1920

W. B. COLE, PROPRIETOR
PAINESVILLE, OHIO

Office and grounds one and one-half miles west of Painesville, on Mentor Avenue, and 28 miles east of Cleveland. C. P. & E. cars every hour from Cleveland and Painesville. Stop 79 is in front of our office and grounds. Bell Telephone No. 97-R.

TO OUR PATRONS

We have carefully arranged prices in this list for each, ten, and one hundred lots, so as to be fair to both the small and large purchaser.

Prices are for regular grade of No. 1 stock of size specified. We reserve the privilege of charging extra for stock personally selected by customer, or for trees of extra heavy caliper, for scarce sorts, or long list of varieties.

One to ten trees or plants at each rates. Ten to fifty at ten rates. Fifty or more at one hundred rates.

Stock will be boxed, baled or crated, and delivered at freight or express office at Painesville, Ohio, in good condition without extra charge, purchaser to pay freight and express charges. We will furnish estimates on freight or express charges when requested. Small fruits and other plants can be sent by mail, in which case the postage will be added to bill. Strawberry plants should always be forwarded by express.

We have aimed to give description of size and grade that will be easily understood. Would be pleased, however, to give any further information wanted by correspondence.

We are growers of nursery stock with thirty years experience and have over two hundred acres of land devoted to the business. We have a large modern cellar for storage, equipped with convenience for grading, packing and handling nursery stock with the least possible exposure and greatest dispatch.

List of varieties and prices subject to change to conform to our stock and condition of trade at the time the order is given.

TIME TO PLANT

Nursery stock can be shipped and planted any time during the dormant season from October 1st to May 1st, when weather is favorable.

RESPONSIBILITY

We endeavor to send our patrons the grade and quality of stock ordered. We do not guarantee our products or assume any responsibility after they leave our nursery, as conditions always exist over which we have no control. It is understood, in case of error on our part, that we shall not be held responsible for a greater amount than the price paid.

TERMS

Two per cent. discount for cash with order or before shipment. To parties having a satisfactory credit arrangement or account with us, one per cent. ten days or thirty days net.

Reference—Cleveland Trust Co., Painesville, Ohio.

NURSERY STOCK SITUATION EXPLAINED

FRUIT TREE SHORTAGE—Apple, pear, plum and cherry trees are not grown direct by sowing seed in the nursery row. It has been found that there are very few places where seedlings of the above can be properly and successfully grown. For this reason, nurserymen favorably located as to climatic and soil conditions, make a specialty of growing fruit tree seedlings and supplying them at one or two years old to other nurserymen. These fruit tree seedlings are then planted out in the nursery row, budded the fall after planting, grown two or three years and marketed.

France has been the main source of supply for fruit tree seedlings in the past. A few fruit tree seedlings have been grown in this country, principally in Kansas, but these have generally been of inferior quality. During the world war the French nurseries have been unable to produce fruit stocks in sufficient quantity to meet the demand of the American trade. Further, during the same period transportation was demoralized on account of war work and all import shipments of seedlings were delayed and arrived in a damaged or worthless condition. This, together with an advance in the price of seedlings charged by the French nurserymen of approximately 1,000 per cent, added still further to the expense of growing the orchard tree.

To take care of this unusual condition, it has been necessary for the nurserymen of this country to advance prices accordingly. As it takes three or four years to grow fruit trees, there will necessarily be a shortage for at least this length of time after seedlings are again procurable in normal quantities. Fruit growers will gain nothing by putting off planting, anticipating lower prices for the next three or four years, as all indications point to higher prices. Even at the advanced cost of fruit trees, as listed this year, orchard planting should be exceedingly profitable. The necessary restrictions in planting of commercial orchards that will result from the shortage of trees, will mean higher prices for fruit for years to come. All available stock should and will be used.

PEACH TREES—Peach trees are grown from seed planted direct in the nursery row, budded and grown two years to salable size without transplanting. The scarcity of peach trees this season is the result of partial crop failure and inability to get required quantity of good seed. The prospects are that this condition will change shortly and that the normal supply of peach trees will soon be on the market.

SMALL FRUITS—Grape vines are not in their usual supply this season, owing to partial failure of cuttings planted last spring. Unfavorable weather conditions delayed planting and this was followed by a mid-summer draught,

causing an unusual loss. It was generally believed by nurserymen and others that there would not be as much demand for vines as in the past on account of the prohibition of the sale and use of fermented wines. For this reason less cuttings than usual were planted. There will probably be the usual supply of grape vines by another season. Government restrictions on interstate shipments of currants and gooseberries have discouraged the propagating of these plants to some extent, resulting in a shortage this season. Local nurserymen will probably increase their plantings to take care of these conditions later. Raspberries, strawberries, etc., are in fair supply and any increase of cost is the result of the additional labor expense.

ORNAMENTALS—The federal horticultural board has prohibited the importation of all kinds of nursery stock except fruit tree seedlings and rose stocks. This country has relied largely upon Holland, Belgium, France and England for small ornamental trees and shrubs. These were imported, planted out in the nursery and grown to salable size by the nurserymen of this country. Many kinds of ornamentals were imported in salable sizes, principally Chinese Magnolias, Purple Beech, Azalea, Tree Hydrangeas, Rhododendrons, Kalmias, Dutchman's Pipe, Clematis, Wistaria, Bush and Tree Roses, Peonies, etc. Some of this stock cannot be grown in this country successfully and such stock will have to be cut out of the nurseryman's catalog as soon as the present supply is used up. Much of this stock can and will be grown in this country but until the nurserymen here can arrange for the growing of this stock, there will necessarily be a shortage of many ornamentals.

TO OUR CUSTOMERS—In order to take care of our customers under these changed conditions, we would request that they advise us as to their wants early. We will be pleased to post you as to available stock and in case of shortage to suggest for your consideration, other desirable varieties or sizes.

We are mentioning some varieties in our list without carrying out prices. We will quote on these on receipt of inquiry, providing they can be supplied at the time.
